

KAQV414 Series

6PIN 400V N.C. TYPE
SOLID STATE RELAY-MOSFET OUTPUT

● Description

The KAQV414 series is robust, ideal for telecom and ground fault applications. It is a SPST normally close switch (1 Form B) that replaces electromechanical relays in many applications. It is constructed using a GaAlAs LED for actuation control and an integrated monolithic die for the switch output. The die, fabricated in a high-voltage dielectrically isolated technology, is comprised of a photodiode array, switch control circuitry and MOSFET switches.
